

graph non-isomorphism problem

time
space

G_1, G_2 are non-isomorphic

1. P_2 selects one of G_1, G_2 $\frac{1}{2}$

2. $G_i, i=1$ or 2

reorder nodes of graph
sent to P_1

$\{a, b, c, d\}$

Reorder

two possibilities

- ① G_1, G_2 isomorphic
- ② G_1, G_2 non-isomorphic

easy for P_1

For $P_2 \rightarrow$ a lot of resources (time, space)

$O(2^{2n})$
 $O(2^{n+1})$

G_1, G_2, G' from P_2

1. P_2 는 reorder만 해주고 그 structure를 P_1 으로 보낸다.

2. P_1 은 많은 양의 resources를 활용하되, G_1, G_2, G' 셋째가 같은 경우로 모든 경우를 본다.

3. 잘못까지 많은 횟수를 반복한다.

잘못이면 isomorphic, 못찾으면 (정확한 횟수 ex) 100번 non-isomorphic
